EDUCATION

Bachelor of Engineering Science – Electrical Engineering

Expected Graduation, May 2028

Western University, London, ON

- **Pursuing:** Electrical Engineering with a dual degree in Artificial Intelligence Engineering Systems
- **Related Coursework:** Electrical Laboratory, Circuit Analysis and Power Sources, Electrical Machines, Machine Learning, Cyber-Physical Systems Theory, Database Management

EXPERIENCE

Electrical Lead Assistant

September 2024 – May 2025

Western Engineering Rocketry Club

London, ON

- Supported the Electrical Lead in designing an **altitude-based parachute deployment system** using **GPS sensors** for **safe recovery during national competitions**.
- Helped with **sensor calibration, wiring, and test simulations**, ensuring **reliable system performance** under competition conditions.

Sales Consultant

April 2025 – October 2025

Bell Canada

London, ON

- Provided **customer-focused technical support** for **mobile devices, electronics, and service activations**, applying **troubleshooting and system knowledge** to ensure smooth setups.
- Assisted customers in evaluating **telecom plans and hardware** (Bell, Virgin, etc.), applying **analytical skills** to recommend **optimized solutions** based on individual needs.

PROJECTS

NeuroSync – Arduino Cognitive Game | *Arduino, C++, Altium Designer, TinkerCAD, PCB Design*

- Designed and built a **memory-reflex training game** on **Arduino Uno** integrating **8 sensors and actuators**: LEDs, buzzer, servo motor, 7-segment display, potentiometer, photoresistor, and temperature sensor.
- Developed a full **C++ program** in Arduino IDE handling sequence generation, player input validation, **adjustable difficulty**, environmental monitoring, and live score display.
- Designed and fabricated a **custom PCB as an Arduino shield** using **Altium Designer**; simulated circuit in **TinkerCAD** prior to physical prototyping and breadboard validation.

AI Pet Matching System | *Python, GitHub*

- Led a team of 4 to develop an **AI-powered pet adoption platform** using **Python and API integration** to match pets with users' lifestyles and preferences.
- Implemented a **Pet Sitter Matching feature** and presented the final prototype demonstrating a **functional and user-focused solution**.

Brushless DC (BLDC) Motor Design | *Electric Machines, Power Theory, SolidWorks, Prototyping*

- Collaborated on the design of a **brushless DC motor**, applying **electric machine principles and power theory** to define motor specifications such as torque, speed, voltage, and power.
- Developed **CAD models of the rotor and stator** and assembled the motor using magnets, copper windings, and bearings.
- Tested motor operation using an **electronic speed controller (ESC)** to evaluate performance and verify functionality.

TECHNICAL SKILLS

Electrical Design Software: Altium Designer, Quartus Prime, Eagle, Micro-Cap, Arduino

Hardware & Prototyping: Soldering, Wiring, Breadboard Circuits, Multimeters

Programming Languages: Java, Python, MATLAB, C++

Development & Computing Tools: GitHub, Google Colab
